EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering | **CGPA: 8.95**

Bhopal, Madhya Pradesh

August 2023 – April 2027

TECHNICAL SKILLS

Languages & Technologies: Java, JavaScript, SQL (PostgreSQL), MongoDB, React.js, Node.js, Express.js

Frameworks & Tools: Docker, Kubernetes, Git, GitHub, Linux, Pandas, NumPy, Matplotlib

Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), REST APIs, Database Management Systems (DBMS), CI/CD, Agile Methodologies, Data Analysis, Data Visualization

PROJECTS

TaskFlow AI | React.js, Express.js, TypeScript, Gemini API

- Engineered a full-stack AI software planning platform that converts product ideas into **8+ implementation-ready deliverables**, including system architecture, API specifications, database schema, sprint plans, and technical documentation.
- Designed and integrated a scalable React.js frontend with an Express.js backend, leveraging **Google Gemini API**, TypeScript, reusable components, and RESTful APIs to deliver an end-to-end planning workflow across **5+ application modules**.
- Automated requirement analysis and documentation generation, reducing initial project planning time by approximately **70%** while generating standardized software blueprints in **under 2 minutes**.

ERP Integration Framework | Node.js, Express.js, PostgreSQL, JWT, Swagger, Docker

- Built a production-grade ERP integration framework with **8+ REST APIs**, implementing JWT authentication, Role-Based Access Control (RBAC), and ETL pipelines to securely transform and expose enterprise financial data.
- Architected a scalable, modular backend featuring Swagger API documentation, Winston logging, health and metrics endpoints, Docker containerization, and PostgreSQL-ready configuration following enterprise software engineering best practices.
- Developed an interactive dashboard and automated integration workflows, reducing API testing effort by approximately **70%** while demonstrating production-ready monitoring, validation, and CI/CD readiness.

Limit Order Book Simulator & Backtesting Engine | Python, Pandas, NumPy, Matplotlib

- Developed a high-performance limit order book simulator capable of processing **100K+ market events**, accurately modeling bid-ask matching, market depth, and order execution.
- Implemented event-driven backtesting for quantitative trading strategies with comprehensive performance metrics, including **Sharpe Ratio**, maximum drawdown, win rate, and cumulative returns.
- Optimized simulation workflows and generated detailed trading analytics, enabling rapid strategy evaluation and reducing backtesting time by approximately **60%**.

EXPERIENCE

Full Stack Developer Intern (Remote)

May 2026 – Present

Satisfaction Drivers Pvt. Ltd.

- Engineered and deployed production-ready marketplace applications using **React.js**, **Node.js**, and REST APIs, contributing to scalable feature development in an agile startup environment.
- Developed workflow automation solutions integrating **Monday.com** with **Google Sheets**, implementing secure API integrations, data synchronization, validation, and error handling to streamline business operations.
- Collaborated with cross-functional teams to design modular backend services, optimize application performance, and deliver maintainable, production-quality software following modern engineering best practices.
